

Single and Double Roller Blinds

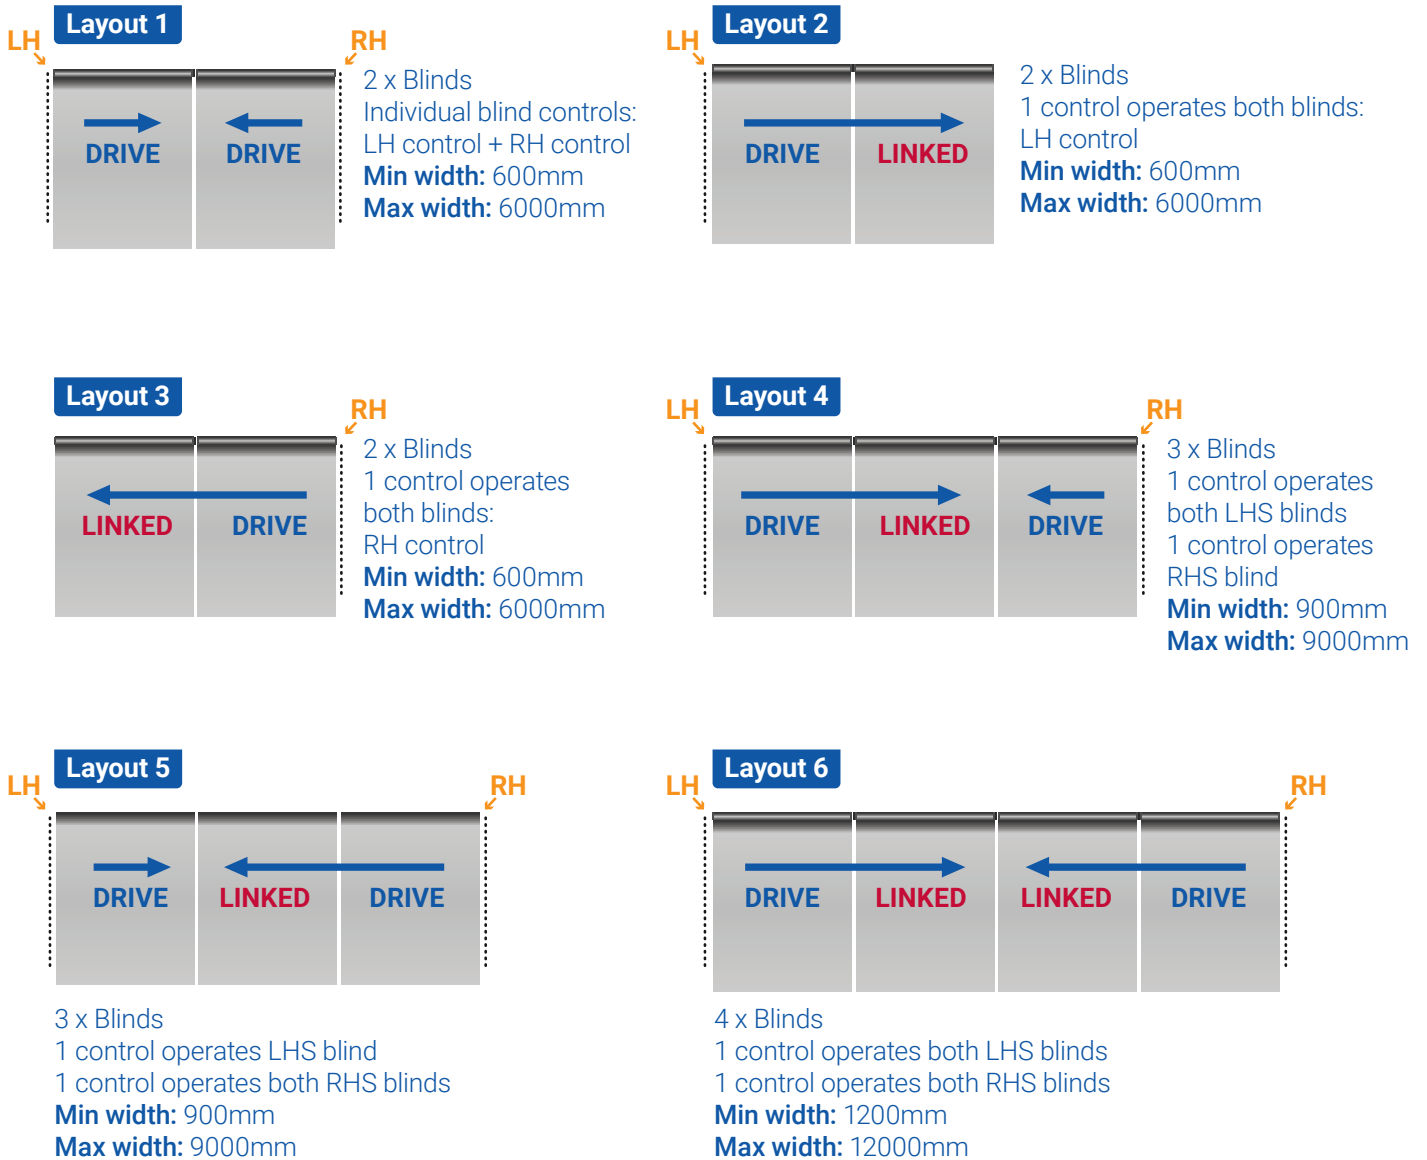

Linked Layouts

Large windows, sliding or bi-fold doors?

Our linked layout options give you great flexibility in combining blinds side by side up to a maximum width of 12000mm.

Linked blinds reduce the gap between the fabric from 32mm to just 19mm. The perfect solution for wide windows, linked blinds also offer multiple options for functionality over an exit door. You can opt for separate controls or you can operate up to 2 blinds with the same control. Select a chain drive or automate your blinds with motors.

Linked blinds are available in both single and double roller blind formats – the link layouts are the same.

Helpful Hints:

Understand the flow of your window. Using a grey lead pencil mark the spot directly over the centre of a natural break in the window, the centre of the doors that butt together or the centre of the overlap between two doors.

Always working from left to right, write down what each individual blind width is.

The individual blind widths you write down should equal the overall width of your window.

If an individual blind width or the combined width of two linked blinds is greater than 1800mm, iseekblinds recommends a Spring assist* for the drive blind (*Spring assist applicable for chain drive blinds only).

DO NOT take any deductions.
